HISTORY

Meets Specifications

SQL Queries

All SQL queries run without errors and produce the intended results.

All queries run without error and produce the desired results, congratulations.

Each SQL query needs to include one or more explicit join. The JOIN or JOINS should be necessary to the query. If a question does not require a JOIN please change the question to be one that does.

Example:

```
SELECT *  
FROM Album  
JOIN Track on Track.AlbumID = Album.AlbumID
```

All SQL queries include one or more explicit join.

Each SQL query needs to include one or more aggregation. This could be a COUNT, AVG, SUM, or other aggregation.

Nice work adding aggregations in all your queries.

The student has used at least 4 unique SQL queries in their submission.

Correct you have used at least 4 unique SQL queries with corresponding visualizations, in your submission.

Presentation

Each slide should have an appropriate title and the visualization descriptions should be free of significant factual, spelling and grammar mistakes.

The slides have appropriate titles and the visualization descriptions are really good.

All visualizations should make logical sense and provide accurate information about the indicated area.

I really like your insights and visualizations. Keep going this way!

All visualizations include a title and axis labels, have a legend where applicable, and are easily understood.

Every visualization should have

- chart title
- x axis title
- x axis labels
- y axis title
- y axis labels

All titles and labels were correctly identified (Please include in the chart on slide 2, the x axis title).

Submission Phase

A PDF report has been uploaded and a .txt file with the queries has been uploaded in a single zipped folder file

Please, be sure to save your Powerpoint file as a PDF file in your next project submission. It is a project requirement to facilitate the review.
